

MMDS Chooses CORELINQ Innovations As Its Vendor of Choice in Providing Radiology IT Solutions For Its Enterprise-Wide Mobile Modalities Network

BIRMINGHAM, AL – July 12, 2016 – CORELINQ Innovations is proud to announce the signing of Mobile Medical Diagnostic Services (MMDS) as its customer in providing enterprise-wide radiology IT services to MMDS' growing radiology provider network of over 1500 facilities. CORELINQ will provide MMDS with its full radiology software suite, including RISLinQ - its radiology information system, RADLinQ - its imaging platform and CORELINQ's on-demand portal management tools for MMDS's client network.

MMDS is the largest provider of mobile radiology and innovative diagnostic studies in the Southeastern U.S., offering mobile modality services including x-ray, ultrasound, echo cardiograms, EKGs and various other medical studies. CORELINQ will facilitate connecting its customers, who are seeking the addition of modalities through a mobile channel, to MMDS in an effort to expose them to all of the opportunities that mobile modality services provides to them. Additionally, MMDS is aggressively expanding its mobile modality services throughout the Southwest and West Coast, allowing more of CORELINQ's client base to have access to MMDS' services.

Harsha Hatti, CEO of CORELINQ Innovations, highlighted the importance of having MMDS as a customer: "CORELINQ has made it no secret that we remain committed to helping our clients achieve three key objectives: growing volume, increasing cash flow and reducing operating costs. By joining forces with MMDS, we are not just adding a valued customer, we are also gaining an incredible partner who will provide our clients new volume growth opportunities through their mobile modality service offerings. This is an absolute win-win for all involved, but most importantly for our customers and the communities they serve. We are excited at what the future holds in our relationship with MMDS".

MMDS CEO, Lloyd Williams, echoed a similar sentiment: "When setting out to find a radiology IT vendor, we focused heavily on a fully integrated software solution that met our needs of scalability, flexibility, price and reputation. It became clear to me and my entire team that CORELINQ Innovations has the right complementary vision for how they view the radiology market and how their products and services play a key role in the future of outpatient radiology going forward. That, coupled with a great discussion with Harsha and his team, cemented our decision that CORELINQ is our vendor of choice as we enter into the next strategic phase of growth for MMDS".

MMDS' implementation of CORELINQ's product suite is slated to begin mid-summer 2016.
